Mbandaka, Democratic Republic of the Congo	Lubango, Angola	Lusaka, Zambia	Lehututu, Botswana	Rundu, Namibia
Tshabong, Botswana	Ouagadougou, Burkina Faso	Moshi, Tanzania	Johannesburg, South Africa	Capetown, South Africa

African Climograph Tasks

- Find your location on a map of Africa. Mark the location with a colored dot.
- Find and record average temperature and precipitation data. In addition, record the latitude and longitude of the location (available with the climate data).
- Make a climograph for each location. Include the name of the place and the latitude and longitude as a heading.
- How would you describe the climate in words. Is it wet or dry? Does temperature vary a great deal or is it reasonably stable. What are the hottest months? Coolest months? Wettest months? Driest months?
- What vegetation do you think you could find at this place?
- What clothes would you pack if you were visiting this place in January? In July? Are there places in the United States with a similar climate? If so, what places?
